SUMMARY

Machine Learning & AI Engineer with hands-on experience building predictive models, neural networks, and transformer-based applications. Skilled in supervised and deep learning techniques such as image classification, segmentation, and object detection, as well as modern NLP workflows and RAG-style LLM integration. Passionate about solving real-world problems through data-driven solutions and eager to contribute to AI engineering teams in junior or internship roles. Actively expanding expertise in model evaluation, deployment workflows, and scalable ML pipelines.

PROJECTS

Exam Prep AI

- Built and deployed Exam Prep AI, an AI-powered web app that quizzes students from uploaded course materials.
- Developed the backend with FastAPI and Uvicorn, integrating the Groq API to generate questions and evaluate student responses.
- Implemented efficient memory management by adding session time limits and storing session content temporarily in memory instead of a persistent database.
- Containerized the application with Docker, deployed to Render, and implemented a CI/CD pipeline using GitHub Actions for CI and Render's built-in auto-deploy after CI passes.

Bible Verse Finder

- Bible Verse Finder is a voice-powered RAG system that listens to live audio, transcribes speech using Whisper, and intelligently retrieves relevant Bible verses.
- Parsed a structured JSON dataset of Bible verses and migrated it into a SQLite database for efficient querying.
- Converted the verses into vector embeddings and saved them to a file so live search is instant.

Retrieval-Augmented Generation (RAG) Implementation using LangChain

- Created an end-to-end RAG pipeline using LangChain to enable context-aware responses.
- Retrieved data from a website and PDF document for ingestion into a RAG pipeline.
- Leveraged the pre-trained Mistral-7B-Instruct LLM via the Hugging Face API for text generation.

Bottle-sorting Project

- Developed a CNN from scratch using PyTorch to classify Pepsi and Coca-Cola bottles.
- Downloaded the image dataset from Kaggle and prepared the data for training, testing, and validation.
- Adjusted hyperparameters and number of feature layers to achieve a peak accuracy of 97% on validation data.

Fine-tuned a pre-trained model on MNIST Dataset using Pytorch

- Downloaded and preprocessed MNIST dataset (resizing, normalization, augmentation) to prepare for model training.
- Fine-tuned 5 of the 13 feature layers in the MobileNetV3 model for efficient digit classification and replaced the classifier head with a 10-class output layer.
- Achieved a 95% accuracy on validation dataset.

SKILLS

Languages	Python, C++, JavaScript
Frameworks	FastAPI, PyTorch, TensorFlow, Hugging Face Transformers, LangChain
Tools	Git, Github, Docker, Render, Comet ML, Google Colab, Microsoft Office
Soft Skills	Problem Solving, Quick Learner, Collaboration, Time Management, Integrity

EDUCATION

B.Eng. in Mechatronics Engineering, Federal University Oye-Ekiti

2023

WORK EXPERIENCE

Image Quality Rating at iMerit

April 2026 - Present

- Annotating images with visual tools like boxes, arrows, pins to highlight the differences between images
- Comparing Images to identify and mark visible differences, such as changes in pose, clothing, objects, background, lighting, and overall mood
- Providing clear and precise descriptions of the differences in English

AI Model Evaluator – RAG-Based Q&A System at Dione Protocol

January 2026

- Evaluated responses generated by a RAG system through structured upvote/downvote mechanisms.
- Identified hallucination patterns and provided qualitative feedback to improve answer relevance, factual accuracy, and contextual alignment.
- Delivered a production-ready RAG-based Q&A system within one month.

Community Moderator at Dione Protocol

October 2025 - Present

- Provided resolution to support tickets by addressing issues and inquiries.
- Served as a communication link between the team and the community.
- Provided on-chain investigation on issues using Odyssey testnet and mainnet scan.
- Joined the developers in troubleshooting chain faults and testing the Dione Quest platform before public access was given to the community.

Community Lead at Striker Games

February 2023 - October 2025

- Hosted marketing campaigns in the community to drive social media engagement and push for wider audiences.
- Utilized questing platforms such as Zealy, Galxe, and many more to drive community growth and engagement.
- Updated the community through announcements and constant communication on official channels.
- Kept the community alive by hosting community events, games, competitions, and giveaways.

CERTIFICATIONS

Hugging Face

Mar 2026

- Fundamentals of Agents
- LLM Course

DataCamp

Feb 2026

- Retrieval Augmented Generation (RAG) with LangChain
- MLOps

OpenCV University

Jan 2026

- Pytorch Bootcamp

Harvard's CS50

Jul 2025

- CS50's Introduction to Artificial Intelligence with Python, including 12 projects
